**DETAILED ACTION*****Double Patenting***

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 10 and 11 are rejected under the judicially created doctrine of double patenting over claim 7 of U. S. Patent No. 6,741,078 since the claims, if allowed, would improperly extend the "right to exclude" already granted in the patent.

The subject matter claimed in the instant application is fully disclosed in the patent and is covered by the patent since the patent and the application are claiming common subject matter, as follows: a vertical field type MRI apparatus with two field generating superconducting coil systems each containing a field generating coil, a round outer coil and a round supplementary coil with one of the field coil systems having the ratio  $D_a/D_o$  of the diameter  $D_a$  of the supplementary coil to the diameter  $D_o$  of the outer coil is between 0.1 and 0.9 and a gradient coil system with a flat main gradient coil and a shielding coil.

Art Unit: 2832

Claim 12 is rejected under the judicially created doctrine of double patenting over claim 9 of U. S. Patent No. 6,741,078 since the claims, if allowed, would improperly extend the "right to exclude" already granted in the patent.

The subject matter claimed in the instant application is fully disclosed in the patent and is covered by the patent since the patent and the application are claiming common subject matter, as follows: a vertical field type MRI apparatus with two field generating superconducting coil systems each containing a field generating coil, a round outer coil and a round supplementary coil with one of the field coil systems having the ratio  $D_a/D_o$  of the diameter  $D_a$  of the supplementary coil to the diameter  $D_o$  of the outer coil is between 0.1 and 0.9 and two cryogenic cooling containers.

Furthermore, there is no apparent reason why applicant was prevented from presenting claims corresponding to those of the instant application during prosecution of the application which matured into a patent. See *In re Schneller*, 397 F.2d 350, 158 USPQ 210 (CCPA 1968). See also MPEP § 804.

### ***Claim Rejections - 35 USC § 112***

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 11 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Art Unit: 2832

Claim 11 recites the limitation "wherein each gradient coil system" in lines 1-2. There is insufficient antecedent basis for this limitation in the claim.
